APPLICATION AND USE

Multiprotocol I/O modules of the MINI-RS series are compact devices working as remote I/Os over RS485 with open protocols, BACnet MS/TP and Modbus RTU/ASCII. The modules can be simply addressed from 0 to 99 using an onboard rotary switch and connected to a BMS via a local controller or using the Modbus gateway functionality in a MIX-IP or MINI-IP module of choice, to create a cost-effective building control solution. The MINI-RS modules can extend building controllers with a number of inputs and outputs and complement the MIX I/O modules. Unlike the MIX series, the MINI line is dedicated to all applications where manually operated switches are required. Built-in algorithms for lighting, cooling, and heating make them suitable for use as standalone controllers. In addition, the modules support timer relay modes dedicated to occupancy sensors. Like the MIX-RS series, the MINI-RS modules are factory-equipped with the two most popular open communication protocols, Modbus RTU/ASCII and BACnet MS/TP, selected with DIP switches. Devices configured to communicate in the Modbus RTU/ASCII protocol operate as server devices, and devices configured to communicate in the BACnet MS/TP protocol work as client or server devices. One major advantage of supporting the modules with open communication standards is the versatility to install them in both new and completed installations, as part of an existing BMS. Built-in mini USB allows for the initial configuration of the unit without an additional power supply.

FEATURES

- 7 different types of modules with RS485 communication
- BACnet MS/TP, BACnet Slave, and Modbus RTU/ASCII protocols, selected with a DIP switch
